WEBSITE CHOICE

SM Operations

Organization description

SM Operation's mission is to tackle the overlooked factors that protect your business from expanding. Our success is based on our ability to please our customers with great customer service efficiently. We are located at the heart of Durban UMhlanga operating on a 24/7 basis.

Why us?

SM Operations is a reliable international organization that receives over 50 000 clients a year. I created this web page to inform businesses as well as assist them with their online visibility, as well as the solution to what may be restricting their businesses from expanding and receiving more customers.

Most businesses face the issue of web pages which are not user friendly or catch the customer's eye when accessing the page which result in the customer either leaving the website about the businesses uninformed or frustrated because the website is very difficult to navigate and that is where SM Operations takes over.

Our user-friendly website has several graphics that users can watch to know more about SM Operations as we do understand that some users prefer graphics instead of writing. Our pop up for quotation for our business is of great assist to the customers to immediately query the price of our services without having to consult.

The live display of all our happy clients as well as revenue made from assisting them allows the user to be more at ease because it shows the legitimacy of our services.

Goals and objectives:

- Fixing Mobile Access on business web page
- Updating old content
- Breaking down confusing menus

17-Week Timeline and Milestones

Phase 1: Weeks 1-3 - Business Foundation and Planning

Goal: Establish business ideas, service offering, and website purposes.

- Finalize the business concept for SM Operations, including the mission, vision, and target audience.
- Identify the main services offered, such as improving mobile access, updating content, and simplifying menus.
- Draft the business plan and prepare a simple pitch for potential investors or supporters.
- Register or secure the business email and begin planning the brand identity.
- Outline the full website structure, including Home, About, Contact, Why Us, and Client Feedback pages.

Milestone: Business concept, website goals, and page structure approved.

Phase 2: Weeks 4-6 - Branding and Content Preparation

Goal: Prepare all branding materials and written content for the website.

- Design the logo, slogan, and visual identity using the chosen color palette: blue, grey, and white.
- Create supporting website assets such as business cards, thank-you cards, laptop stickers, and Yocco branding visuals.
- Write the content for each website page:
 - Home page introduction
 - About page story, mission, vision, and services
 - Contact page details
 - Why Us page
 - Client Feedback page
- Collect or create images, videos, and team photographs for the website.
- Prepare quotations wording, call-to-action text, and contact form messaging.

Milestone: Branding kit and all website content completed.

Phase 3: Weeks 7-9 - Website Design and Development

Goal: Build the first working version of the website.

- Develop the website using HTML and CSS.
- Create the layout and styling for all main pages.
- Ensure the color scheme and branding remain consistent throughout the site.
- Add images, videos, borders, forms, and page sections according to the content plan.
- Build the navigation menu and footer with contact details.
- Make the website responsive so it displays properly on different screen sizes.

Milestone: First full website prototype completed.

Phase 4: Weeks 10-12 - Functionality and User Experience Improvements

Goal: Add interactivity and improve usability.

- Add the contact form and test whether enquiries can be submitted properly.
- Integrate the WhatsApp chatbot for easier communication with clients.
- Embed the Google Map on the Contact page.
- Improve user experience by checking page flow, menu clarity, and readability.
- Optimize layout spacing, alignment, and content presentation using CSS.
- Test the site on mobile, tablet, and desktop devices.

Milestone: Functional website with working interactive features.

Phase 5: Weeks 13-15 - Testing, SEO, and Launch Preparation

Goal: Prepare the website for public launch.

- Test all links, forms, buttons, videos, and navigation elements.
- Fix any design errors, broken sections, or content inconsistencies.
- Apply basic SEO optimization, including meta tags, structured content, and sitemap setup.
- Improve page loading speed through image compression and lazy loading.
- Connect the project to GitHub and prepare it for online publishing.
- Review the website against the business goals and target audience needs.

Milestone: Website tested, optimized, and ready for publishing.

Phase 6: Weeks 16-17 - Website Launch and Early Growth

Goal: Publish the website and begin attracting clients.

- Publish the website on GitHub Pages.

- Perform final checks on live pages after publishing.
- Start promoting the business through WhatsApp, social media, and direct business outreach.
- Offer free or discounted UX audits to attract the first clients.
- Begin collecting feedback, quotations, and client enquiries through the website.
- Monitor early performance using basic analytics and visitor tracking.

Milestone: Website launched and first client outreach campaign started.

Budget

3 Months budget plan:

Month 1: Development

Item	Cost	Notes
Domain	R150/year	
1-Page Website	R0-R2 500	R0 if you use a car. R2 500 once-off if you pay someone on up work
Audit template + checklist	R0	Made on Google Docs or Canva
Loom Pro	R220/month	Needed for unlimited 5min audit videos+ branding
Canva Pro	R180/month	For PDF reports + client graphics
Total setup	R550-R2 900 once off + R400/month	Start free, upgrade when first client pays

Month 2: Hosting +Tech Running Costs

Item	Cost	Notes
Website hosting	R0 – R99/ month	Card = R0 on free plan. Webflow = R99-R350/ month for custom domain
Email	R0 – R50/ month	Use Gmail for free at start. R50/month for using our email.
Yocco/PayFast	R0 set up, 3.5% per sale	Only pay when you get paid. R5 500 sale = R192 fee
Forms + Booking	R0	
Total Hosting	R0 – R149/ month	Can start at R0

Month 3: Monthly maintenance = Ops

Item	Cost	Notes
Your time	R0	Sweat equity for months 1-2
Ads to get clients	R200/day = R600/month	Optional, start after 3 free audits. R6000 can bring 5-8 leads
VA for first checks	R0 – R2000/month	Week 5 only. Pay per audit, R200 each
Software total	R400/month	Loom+ Canva from above
Total maintenance	R400 – R8 400/month	R400 bare bones. R8 400 if running ads + VA

Website Assets

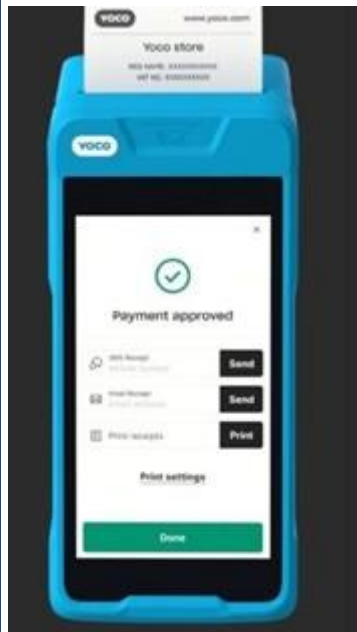

Business card

Laptop stickers

Thank you, card

Yocco Speed point

Website Pages and Content

Home page

The front door of the site, the first thing the potential client sees and explains who the business is and where to go next in under 5 seconds. The colors throughout the webpage were inserted using CSS; they were also used to match those of the logo to create uniform look.

Content it contains:

- Logo- top center, the brand of the business
- Slogan- “Your escape to an effective webpage” keeps business memorable

The home page also has an image and a looping video that showcases the aesthetics of tech to show the potential clients that are niche is mostly tech related.

I used CSS (Justify content center) to align the logo as well as the slogan, footer and ‘Welcome to SM Operations’ to the center. I also used it to put borders around the image and video.

About page

This page build trust. People buy it when they know who you are and why you care. The About page is text heavy but broken up with images. Colors stay the same as the Home page for consistency; it functions as a story and proof page. No hard selling but a sort of “this is me and this is why I am not a scammer”

- Links to other pages so people can leave whenever they please
- Contact; same as Home page
- Copyright 2026

The about page also consists of all the details that a potential client will need to get to know us. These details include; “The about” information Which gives a brief explanation about the business. The mission and vision further explain the core values of the business website.

There is also a box with bullet points which enlightens the client on what services we provide as a business.

The lower part of the page consists of a portion which is labelled “Meet our team” and consists of 3 photographs of the individuals who work in the organization; their positions are labelled under their pictures. I inserted the pictures along with their descriptions into separate boxes. Photos give visual representation which assists in customer loyalty and knowing that the business is run by real people.

I used CSS to align the vision and mission side by side with borders around them. I did the same thing for the “About us” and “Our Services” as well as the “Meet our team” categories.

Contact

Although the footer with all the information our potential clients can get in touch with us, this page provides additional information on how the user can get in touch with SM Operations. I inserted a box where you can type in your name, your email address, as well as a message. Our location and map are also included next to the contact details box.

I used CSS to align the “Contact us” box and map side by side.

We also used JavaScript to install a pop-up WhatsApp chatbot for easier communication between SM Operations and the client as WhatsApp is the most popular networking platform.

Why us?

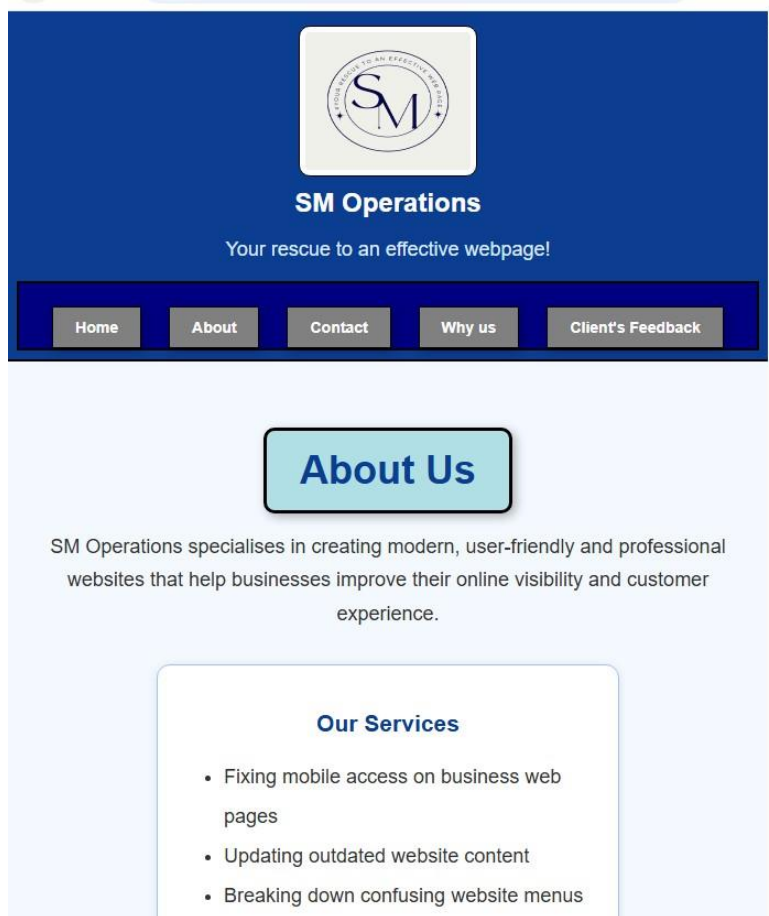

This page essentially describes what makes SM Operations different from other organizations. I centered the box with this description. I also inserted tech related visuals on either side of the “Why us?” box. The looping video at the bottom also allures the user’s attention. CSS was also used to center the text and the image and arrange in the manner that they’ve been arranged in; I also used it to put borders around this media.

Client’s Feedback

This page is essential for constructive criticism from the clients as well as any additional information that they might need. They can also request quotations from SM Operations based on the services of their choice. I inserted this fill in form in a box format.

The visuals at the bottom that are stored in 3 different boxes are those of the prior client’s website, an example of a design project which the customer may refer to.

CSS was used to center the “Client’s feedback” fill out form and interactive boxes where the client can fill out their details. It was also used to place the images at the bottom as well as putting borders around them.

(This is a screenshot of the display of the SM Operation's website projected on a different sized screen.)

Target audience

- Businesses with little to no media visibility
- Businesses who need user-friendly websites
- Businesses who want to update their existing webpages

Website goals and objectives

- Enhance brand awareness; increasing visibility and recognition of business among potential customers
- Driving traffic; increasing number of people visiting the website

- Improving user experience
- Provide affordable services

Key performance Indicators

KPI Metric	Growth target (Month 3)	Growth target (Month 12)
Quotations	70 +	200 +
Number of websites tackled	60 +	175 +

Current website analysis

➤ **Strengths**

1. Contains basic contact information and physical address
2. Has a functioning contact form for enquiries
3. SEO Optimization — Structured data, meta tags, sitemap, and Google Analytics integration
4. WhatsApp chatbot - Direct messaging for instant guest support
5. Page Load Speed — Target under 2.5 seconds; lazy image loading

➤ **Weaknesses**

1. Feature which displays the number of customers that we've assisted and updates as we finish working on it
2. A review page which is visible to customers that are browsing

Design and user experience

The website design of SM Operation will reflect a seamless professional look with the variations of blue, grey, and white. These shades create an atmosphere of safety, reliability, and modernized technology.

Color scheme

<i>Navy (Background)</i>	<i>Blue (Borders)</i>	<i>Grey (Form backgrounds)</i>	<i>White (Main background)</i>

User experience considerations

- Navigation – Primary navigation with clear menu
- Accessible google map

Technical Requirements

Domain name	Github.io.com
Host	GitHub

Technology stack

Front-end	HTML, CSS, JavaScript (ES6+)
------------------	------------------------------

Payment gateway	Yocco
Version control	Git (GitHub)- for codebase management and collaboration
